

NovaMart Marketing Analytics Q-Review

Addressing Efficiency & Growth

Marketing Analytics Team

Q3 Analytics Report

2,418

Customers

5,224

Leads

19,045

Sessions

39

Campaigns

2,808

Transactions

Agenda

What this deck answers:

- ▶ **1. Data Overview** & Quality Flags
- ▶ **2. Top Findings** across Channels, Campaigns, Regions, and Segments
- ▶ **3. Predictive Modeling** (Lead Prioritization & Retention)
- ▶ **4. Top Actions** & Budget Allocation for Next Quarter
- ▶ **5. Risks** & Limitations

Goal

Improve marketing efficiency and customer growth over the next quarter.

Data Overview & Quality Flags

Analyzed 5 Data Sources

Customers, Campaigns, Leads, Sessions, and Transactions.

Key Quality Flags

- ▶ Spend vs Budget anomalies in Campaigns.
- ▶ Impossible dates (conversion before lead).
- ▶ Missing values (NaN) handling across demographic variables.

Unattributed & Anonymous

- ▶ Unattributed leads (no campaign id) and anonymous leads kept to highlight tracking gaps.
- ▶ Outliers (e.g. extremely long session times, invalid ages) have been removed or imputed.

Top Finding 1: Best Acquisition Channels

Question: Which channels generate most leads and value?

- ▶ Search and Meta generate the highest volume of leads.
- ▶ Organic and Direct channels, although lower volume, drive higher value customers (AOV & Repeat Buying).

Action: Shift 15% budget from low-conversion Display to Search.

Top Finding 2: Campaign Efficiency vs Quality

Question: Which campaigns are surface-efficient?

- ▶ Awareness campaigns generate cheap clicks but very low revenue/ROAS.
- ▶ Targeted Lead Gen campaigns demonstrate much higher ROAS.

Action: Redesign Awareness campaigns to include stronger call-to-actions, or pause them in favor of lead-gen.

Top Finding 3: Regional & Device Patterns

Regional Performance

- ▶ South East region shows highest conversion and revenue.
- ▶ Other regions underperform relative to spend.

Device Discrepancy

- ▶ Mobile users account for 60% of sessions but only 40% of revenue.
- ▶ Indicates a high bounce rate or checkout friction on mobile.

Action: Optimize mobile checkout experience immediately.

Top Finding 4: Discounting Effectiveness

Question: Does discounting justify margin sacrifice?

- ▶ 10-15% discounts significantly lift LCR for New Customers.
- ▶ Discounts $> 20\%$ do not improve LCR enough to justify the margin loss.

Recommendation

- ▶ Cap discounts at 15% for new leads.
- ▶ Stop discounting for 'Champions' segment, who are price-insensitive.

Top Finding 5: Customer Segments & Value

K-Means Clustering

Identified 4 distinct segments based on transaction and behavioral data.

- ▶ 'Champions' deserve VIP treatment, early access, no deep discounts.
- ▶ 'At Risk' segment needs targeted re-engagement campaigns.

Behavioral Signals

- ▶ High correlation between add-to-cart events and final purchase.
- ▶ Low correlation with pages-viewed for 'At Risk' segments.

Lead Prioritization Model

Predictive Lead Scoring

- ▶ Built Gradient Boosting model predicting 30-day conversion.
- ▶ Top 20% of scored leads capture over 60% of conversions.
- ▶ Analyzed with SHAP feature importance.

Action: Sales team must prioritize top 2 deciles daily.

Retention Model: Early Warning Signals

Repeat Purchase Predictor

- ▶ Predicts repeat purchase within 90 days of first order.
- ▶ Helps identify 'one-and-done' buyers.

Early Warning Signs

- ▶ High acquisition cost combined with low first-order AOV strongly predicts churn.

Action: Trigger automated win-back emails at day 60 for low-probability users.

Top 3 Actions for Next Quarter

1. Reallocate Budget

Shift 15% Display budget to Search & Meta for higher LCR and ROAS.

2. Intelligent Lead Prioritization

Implement the Gradient Boosting Lead Scoring model for sales team prioritization.

3. Targeted Retention & Discounting

Launch VIP retention track for 'Champions' and cap broad discounting at 15%.

Budget Allocation Recommendations

INCREASE SPEND

- ▶ Search & Meta lead-gen.
- ▶ South East regional campaigns.
- ▶ High-intent retargeting based on predictive scores.

REDUCE / REDESIGN

- ▶ Broad awareness display ads (low ROAS).
- ▶ Generic 20
- ▶ Blanket emails to 'Lost Causes'.

Risks & Data Limitations

What we know

- ▶ Conversions and last-touch attribution are reliable for captured sessions.
- ▶ The models show robust predictive power on known users.

What we don't know (Risks)

- ▶ 'Anonymous' leads limit full lifecycle ROI calculation.
- ▶ Cross-device tracking causes fragmented session data.

Recommendation: Implement server-side tracking to close data gaps.
